Project: Multi-site fleet modernization

Ergotron products: StyleView® 42 Medical Carts

StyleView Medical Carts Support Efficient and Comfortable Documentation

BERLIN, GERMANY

Nursing staff at Alexianer St. Hedwig Hospital, one of the longest established healthcare organizations in Berlin, requested new medical carts at two sites for enhanced documentation across multiple care applications.

They sometimes used laptops or wall workstations for documentation and wanted to enhance workflows and productivity with versatile mobile solutions.

Efficient vaccination workflows

Alexianer St. Hedwig Hospital is also using their new StyleView medical carts for COVID-19 vaccination administration. The flexible, mobile design supports quick and accurate documentation in patient rooms and beyond. View Ergotron's [COVID-19 resources](#).

“Out of 10 vendors, Ergotron’s StyleView 42 Medical Cart was the best fit, not only for our clinicians but also for our IT team.”

— Alexander Wittig,
Assistant to the Nursing Director

Their current medical cart fleet was cumbersome and heavy, making it difficult to transport supplies and devices throughout the facility. The bulky carts also added unnecessary strain to already tired nurses and clinicians.

They requested flexible, adjustable carts for easy documentation. They wanted a highly mobile design that also saved space in crowded patient rooms and hallways. Nurses and the IT team desired configurable options with multiple accessories, without the need for professional installers.

Since caring for staff is a top priority, they requested a lightweight platform that would limit extra aches and pains while also being sturdy enough to withstand regular use.

After seeing Ergotron carts at another hospital, leaders contacted Ergotron directly to try the medical carts. The staff also tested medical carts from nine other vendors in the hospital environment.

Out of the 10 vendors, the team decided Ergotron’s StyleView 42 Medical Cart was the best fit due to its flexibility and innovative battery with long run times. They appreciated the height adjustment that allows for an individualized workplace design. They also valued how the lightweight design was easy to maneuver.

“Colleagues were happy that digital documentation can take place next to the patient’s bed,” said Alexander Wittig, Assistant to the Nursing Director.

For the IT team, they pointed to the ability to easily add additional components like a thin client, keyboard or monitor. In many cases, staff could quickly adjust accessories themselves after implementation without requiring time from IT team members.

Now clinicians at both sites have a flexible and reliable mobile workstation to support comfortable documentation workflows.
