

SMARTGATEWAY™

Accelerating Digital Payment Transformation

With our proven expertise as SKNBI solution provider for the Central Bank and majority of banks since 1990, we are introducing **SMARTGATEWAY™** as part of our commitment to support all participants - both bank and non-bank financial institution - in the implementation of BI-FAST and other digital payment system.

Designed and developed to support the real-time and straight through payment processing, **SMARTGATEWAY™** enables participants to save cost and boost efficiency by being so smart, adaptable, and scalable – ensure minimum modification on interface while also highly flexible to accommodate the needs of other digital payment method.

SMARTGATEWAY™ Key Features to Support Fast Payment

- ✔ **Time saving and ready to use** with minimum modification
- ✔ **Proven workable and effective design** to perform seamless straight through processing
- ✔ **Quick problem solving** with real-time monitoring and alert notification

 Delivery Channels Branch Trade Treasury Internet Banking ePayment	Features*					 Payment System BI-FAST RTGS Others
	Message Converter	Message Router	Alert and Notification	Duplicate Checking	Audit Trail	
	Real-time Monitoring	Cut-Off Time	Housekeeping	Exception Handling	Bulk	
	Reconcile	Priority Queue	Inquiries			
	Reports					
Security Access Control						
Alert & Notification						
Extract, Transform & Load (ETL) Engine						

Flexibility and Visibility Maximized

Built with intelligence in mind

Real-time Monitoring & Alert Notification

Trace the status and flow of each transaction easily. The automatic SMS or email notification to authorized users also ensures that you will be aware and react quickly to manage any error transactions.

Message Router & Converter

Fully configurable to identify various format of transaction message, **SMARTGATEWAY™** smartly routes and feeds incoming messages into other payment system for further processing, such as RTGS or credit card payment

Automatic Reconciliation

Easy comparison of transaction status (pending/successful) and generate comprehensive reports at the end of the day

Data Validation & Encryption

Ensure data accuracy by validating the outgoing and incoming transactions. Even more, all of the data can be transferred, stored, and encrypted in the database to enhance security and prevent malicious access to sensitive data.

Support SKNBI Format

Highly flexible to adapt with current SKNBI Gen. II format, greatly saves time and efforts with zero to minimum modification on interface

Support Various Integration Method

Seamless integration with multiple bank hosts via different type of interface such as Web Service, API, MQ, Database, and SFTP
